ACCESS TECHNOLOGIES to add new Marine Radio Cover to its line for 2001. The company Will show the MRCV-300 at its booth at the upcoming CES 2001 in Las Vegas, January 6th through 9th, 2001. The company's booth is located in the Las Vegas Convention Center - Mobile Electronics Section at booth No. 22103.

ACCESS TECHNOLOGIES is adding the MRCV-300 Marine Radio Cover to its selection of Marine Accessories for 2001. The unit is 400Hr. UV stable and water-resistant and meets the industry's standards salt and fog tests. The removable plastic front bezel is unique in that it can be painted to match custom applications.

The MRCV-300 features a self-opening door function, which is easy to use, and has a durable long life mechanism. Applying a small upward press to the door actuates the self-opening door. The door then opens automatically via its damped spring mechanism.

The tinted acrylic door is fully sealed with rubber gaskets on the top and bottom edges. The design prevents water spray from entering the cover, preventing the radio from water damage. With the addition of the optional chassis cover, the radio can be further protected from water dripping down on the radio chassis. The support bracket is designed to fully support the radio and protect it from excessive hard knocks during rough water rides. All materials used are spec'd to meet stringent marine standards for both ultra violet protection and salt/fog anti-corrosion protection.

For more information on the MRCV-300 and the other fine *ACCESS Technologies* products, contact *ACCESS TECHNOLOGIES*, call or FAX the numbers listed above.
