HEADLINE: Access Technologies announces major product upgrades to their Marine Remote Commanders MRC-2 and RC-1B

BODY: Extensive research has culminated in several product quality upgrades to award winning Access Technologies Marine Remote Commanders. New material in the housing and keypad that was specifically designed for Access Technologies Marine Remote Commanders yield UV resistance in excess of 800hr under accelerated testing. New gold plated metal dome tactile contact switches that are sealed under a Mylar moisture barrier. Revised one piece back cover that incorporates specially engineered insert nuts that resist pull out and new connection cable incorporating Access's patent pending sealing/locking connector system, are just a few of the many advancements and improvements made to the Marine Remote Commanders this year. Access Technologies is committed to continuous quality improvements to all of its projects. Look for more in the near future.
